

This Project was consistent to partial contractor design and build, ran by Abbey Electrical project manager we were able to complete an ultra-low temperature freezer farm consisting of 300x freezers. this project consisted of new Submain Cabling, New Distribution, Busbar, data, FMS, UPS, small power, lighting, and containment. Liaising with principal designer and principal contractor on site we were always able to exceed the program of works keeping the client happy not only with how efficient we were but with the quality of workmanship also. We were also able to help on this project financially with vast amounts of value engineering to ensure costs were kept low, but quality of work did not change. Our Team really performed on this one to make this one of the best Abbey Electrical Projects to date.

Ultra-Low Freezer Farm

**Category of Job:
Pharmaceutical**

**Contract Value:
£690,000**
