

This Project was to help our client with the current 2022 energy crisis to save on bills and money by being more efficient anyway possible and in this case, it was to replace and upgrade old Halogen fittings with much more efficient LED. Abbey Electrical carried out the full installation and ensured safety was maintained throughout the duration of works with members of the public being the biggest challenge. All relevant calculations were carried out to ensure optimal LUX Levels were achieved while still achieving a 50% efficiency increase from what was installed and being used previously. All relevant documentation was issued to client upon completion of works.
